

Quick Recap of reading user Input.

① Scanner Class

② Buffered Reader

③ Additional method → Using Console class.
(may not work in IDEs).

(*FileReader for reading txt files)

Scanner Class.

→ Scanner sc = new Scanner(System.in);

String s = sc.nextLine();

int a = sc.nextInt();

*If multiple programs are present put inside a for loop.
(Inputs)

*for checking input is int or not, methods like
hasNextInt() can also be used.

Buffered Reader

→ BufferedReader br = new BufferedReader(new
InputStreamReader(System.in));

String name = ~~reader~~ br.readLine();

int num = br.read();
