Quick Recap of Naming Conventions
in Java

① Makes your code easier to other programmers and your future self.

a) <u>Packages</u>

Always lower case and unique.
Reverse of domain name (Eg:- com.google).

Eg:- switch.supplier.com ⟶ com.supplies._switch

(Special cases)
1world.com ⟶ com._1world

(-',numbers & Java keyw)
Expert1-exc.com ⟶ com.expert1_exc

b) <u>Class Names</u>

Camel Case and should be nouns.
Eg :- ArrayList

c) <u>Interface Names</u> same as Class Names.

d) <u>Method/function Names</u>

mixed Case (start with small, then all capital).

Often verbs.

Eg:- size(), getName().

4) Constants

Should be all UPPER-CASE.

Seperate words with underscore.

Declared using 'final'.

Eg:- static final int MAX_INT = 10;

5) Variable Names

Should be mixed Case.

Would be better if they are meaningful.

Try not to use underscores.

6) Parameter Type

Single capital letter (in Generics)

Eg:
```
E → Element.
K → Key
T → Type
V → value
```
